The world has woken up to the need to reduce carbon emissions and waste to avert climate catastrophe. At this critical moment, millions of meters are needed throughout the world to ensure electricity is supplied and used thoughtfully. Smart meters need to be built to last for longer time, maximising their potential and delivering more for less. Today's technology has the capacity to deliver near faultless electricity services throughout the world whilst reducing the cost of doing so, including generating less waste and reducing carbon emissions.

Our 10 year no quibbles warranty is another opportunity to deliver value to our customers and improve the economics for them.
